Steel Tonnage

140 tonnes

The photograph shows the NHS Direct Call Centre in Nottingham. This was the third building in the Island Business Quarter, known locally in Nottingham as the Island Site, which was framed with structural steelwork fabricated and erected by Caunton Engineering. It was also the third build on the Island Site for Simons Construction.

The first building constructed for Simons Construction was the Headquarters for the BBC and the second was offices for the East Midlands Regional Development Authority.

The Call Centre itself comprised of 3 floors with 22,300sq.ft of office space. There was a feature plant room which incorporates a single-ply membrane roof, architecturally designed to be in keeping with the surrounding buildings which were already located on this prestigious Island Site.
