Steel Tonnage

1,400 tonnes

Caunton Engineering were awarded the contract for the structural steelwork for the Lidl GB Head Office by major contractor Winvic Construction. The £70 million head office location in Tolworth, southwest London was five miles away from Lidl's previous HQ in Wimbledon and was completed over a two year period. With 250,000sq.ft of office space, the building accommodated the retailer's 800 head office employees as well as providing support for its growing store network and 12 warehouses across the country

Erection of the steel frame required 1,400 tonnes of steelwork for the five-storey framework. Situated adjacent to the A3, the building's structural frame measured 112 metres by 43.8 metres wide and gains its stability from concrete cores. Open plan offices were created on all floors with long span beams, with the longest measuring 15.2 metres long.

Overall, Caunton erected 5,174 individual steel pieces for the project, with the heaviest weighing 13.8 tonnes.
