Steel Tonnage

1,000 tonnes

Caunton Engineering designed, supplied and erected the structural steelwork for a 730 space multi-storey car park (MSCP) in the centre of Stoke-on-Trent. The car park comprised of a ground floor and six upper floors.

The company was working on behalf of main contractor Willmott Dixon Construction. Caunton supplied 1,000 tonnes of steelwork as well as installing the metal decking, PC stairs and lift shafts.

Located adjacent to Potteries Way, the MSCP forms part of the wider Smithfield development, a £300 million joint venture between developer Gener8 and Stoke-on-Trent City Council, which aimed to create a new mixed use district in the city. Work on the MSCP was completed in the third quarter in 2022 and was funded by the city council, which was responsible for the operating of the facility.
