**Steel Tonnage**

1,300 tonnes

Caunton Engineering designed and supplied structural steelwork for main contractor McLaren Construction at a major colliery reclamation site in Yorkshire. The steelwork was part of Phase 1 of the development of 1.1 million square foot of state of the art warehousing, Konect 62, by development firm Henderson Park and Cole Waterson.

The site was near Knottingley, where Kellingley Colliery once stood. The colliery was the UK's last deep mine, shutting its doors in 2015 after 50 years of operation. Caunton supplied 1,300 tonnes of structural steelwork within the development, for two triple span portal framed buildings, together with framing for an internal office and a twin span external office.
