Richard Jackson

.....  
**Steel Tonnage**

3,730 tonnes

Caunton Engineering's steelwork is for garden and leisure retailer, The Range and their distribution warehouse at Gateway 14, Stowmarket. For this contract, speed was of the essence, with Caunton having supplied and erected the main and secondary steelwork, which included cat ladders, in just nine weeks for the 111,000m<sup>2</sup> warehouse. With sustainability at the heart of this project, a large percentage of the steel tonnage was produced from recycled steel.

Out site manager for the contract said: "completing the 1,982m<sup>2</sup> office first gave us a stable core from which to start our work. We then erected the main building in a phased programme, with the central spans going up first, followed by the outer spans."

The steelwork for this contract was designed by Caunton Engineering.

We are pleased to have been awarded this contact, by main contractor, Winvic Construction, for this impressive distribution centre.
